

**⊕ Feature**

- Low profile very effective in space-conscious applications.
- Low resistance and high energy storage.

**⊕ Applications**

VTR, OA equipment, digital camera, LCD TV, notebook PC, portable communication equipments, DC/DC converters, power supply

#### 标准状态Standard atmospheric conditions

Unless otherwise specified, the standard range of atmospheric conditions in making measurements and test as follows;

Ambient temperature :  $5^{\circ}\text{C}$  to  $35^{\circ}\text{C}$ , Relative humidity: 45% to 85%, Air pressure: 86kPa to 106kPa

If more strict measurement is required, measurement shall be made within following limits;

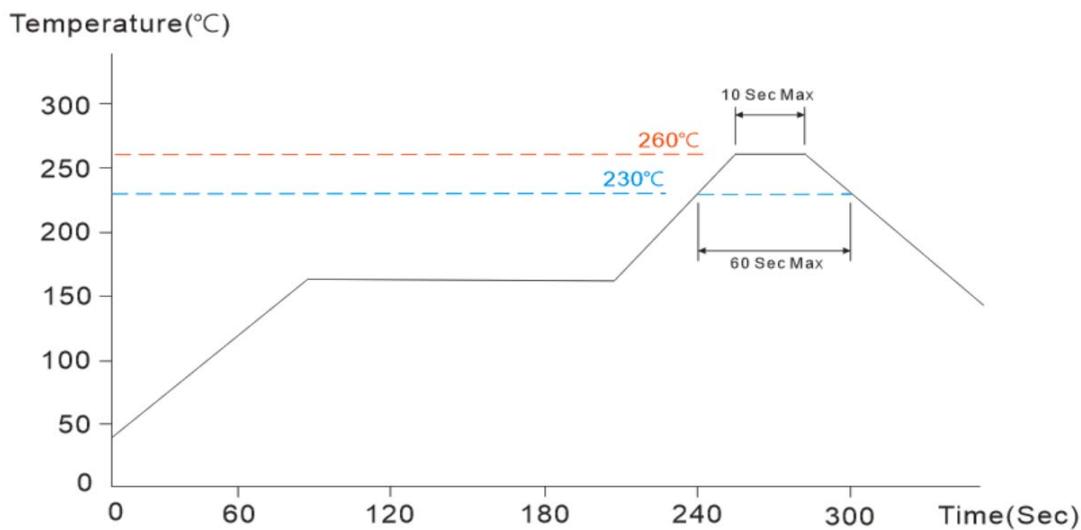

Ambient temperature :  $20\pm2^{\circ}\text{C}$ , Relative humidity:  $65\pm5\%$ , Air pressure: 86kPa to 106kPa

#### 禁用物质Prohibited Substances

我公司保证我司的产品和生产过程符合“RoHS 规则” · 所有产品中使用的材料均是化学物质生产规则中登记的材料。

We confirm that our products and our production process accord with "rule of RoHS". All materials used in this product are registered material under the law concerning the examination and Regulation of Manufacture of Chemical Substances.

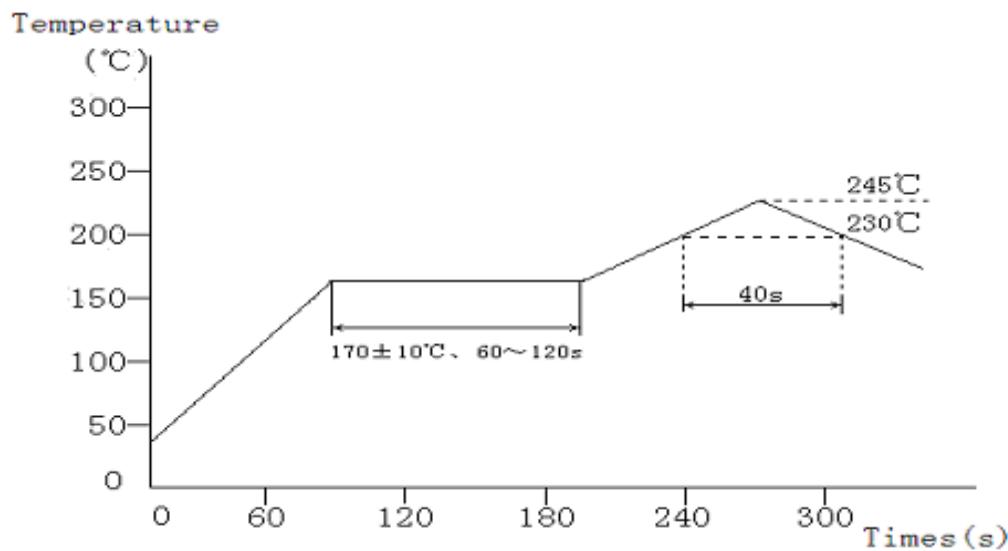

### ⊕ Reflow Soldering Heat Endurance

No mechanical and electrical defects are found after testing based on the above profile and keeping under the conditions of room temperature and humidity for 2 hours.

Twice reflow test is acceptable with the test interval remaining 1 hour under the normal conditions.  
The reflow test profile may vary with the testing instruments.

### ⊕ Recommended Reflow Conditions

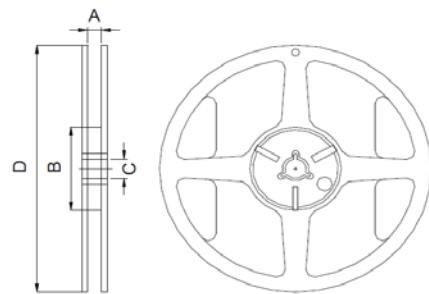

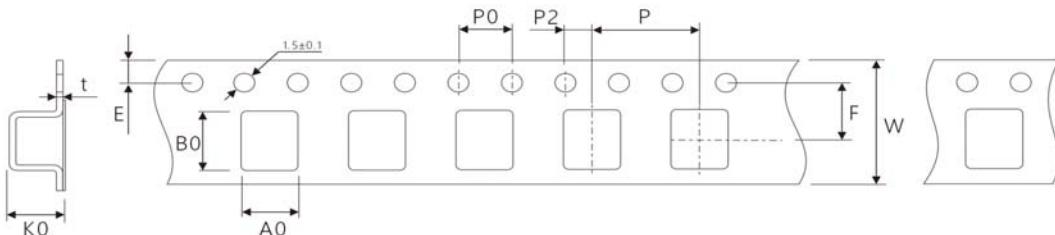

The recommended reflow profile is based on the testing instruments used. Solder ability will depend on the testing equipments, reflow conditions, testing method, etc. So it is necessary to make a confirmation of them when the reflow conditions are set up.

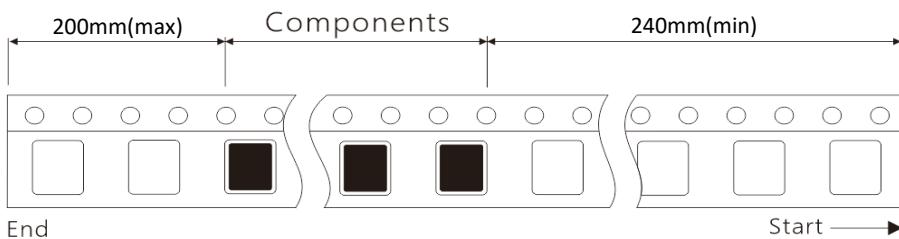

However halogen lamp shall be used, side heat will be beyond range of resistance heat, so we can't recommend it.
